DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

1. Claims 1 and 3-5 are rejected under 35 U.S.C. 102(b) as being anticipated by US (2002/0057301).

With respect to claims 1 and 5, Ikeda discloses an apparatus and a method for printing a print medium with a print head comprising:

A carriage for mounting and moving the print head (Column 3: [0042]);

A lift motor for changing a distance between the print head a=mounted n the carriage and the print medium (Column 3, 4: [0056]);

A control unit for controlling a driving of the lift motor and a reciprocal movement of the carriage (Column 3: [0056]);

Wherein the control unit checks an operation of the lift motor by detecting a distance of travel of the carriage (Column 4: [0061, Column 5: [0074, [0075], 0079], [0083])

With respect to claims 3 and 4, Ikeda discloses that a movable range restriction mechanism which changes a scan range of the carriage in a main scan direction according to the distance set by the lift motor and the control unit detects a movable

range of the carriage by driving the carriage and according to the movable range, detects the distance set by the lift motor (Column 4: [0065],[0076], [0078], [0081]-[0083]).

Allowable Subject Matter

2. Claim 2 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claim 2 is allowable over prior art of record because at least prior art have not been found to anticipate or teach the control unit checks whether the lift motor is normal or not and if the lift motor is found not normal, announces an error state by an annunciation means.
